

Technical Services Memo

Volume: 18

Number: 18

Date: 11/21/96

Product Code: B3 S3 GETC

Subject Code: DA RX

Part Number: 19A149219

LBI: 31532

CATEGORY: AEGIS/Voice Guard

SUBJECT: VG Radio Enters Conversation Late Through Repeater

PROBLEM:

It appears to take the better part of a second to establish communications using AEGIS or Voice Guard, when communicating through a repeater. The system had previously worked OK with Outside Address of 55. After the OA was changed to other than 55, the late entry problem occurred intermittently

SOLUTION:

Problems with Late Entry were corrected with **GETC software, 19A149219G9**. This software is also used in the satellite receiver GETC when voting convention AEGIS/VG.
