ALM CORD DATA SHEETS

ALM Cords

Shure ALM cords use a common connector and wiring configuration on the microphone end, with varying connectors and wiring configurations on the radio end. The most basic configuration is model ALM-1, which has no connector on the radio end.

Some ALM cord models are made by taking an ALM-1 and adding a connector on the radio end. Depending on the radio involved, the connector:

- may have been a commercially-available part
- may have been assembled by Shure from commercially-available parts
- may have been a custom part obtained directly from the radio manufacturer, or
- may have been custom-manufactured by Shure or a contracted vendor according to the radio manufacturer's specifications.

This means that replacement connectors may or may not be readily available, or may not be available under a single part number.

In some cases, the radio-end connector is molded onto the cable. This is usually done by sending ALM-1 cords to the connector vendor and having them assemble and mold the connector. These connectors are generally not repairable or replaceable without the necessary tooling and machinery. This has been noted on the cord data sheet where applicable.

Instruction Tags

Some ALM cords are shipped with an instruction tag attached, which contains information on required modifications to the microphone or radio that apply in certain situations. Note that the same instruction tag often ships with more than one ALM cord.

GENERAL SPECIFICATIONS FOR ALM CORDS

GENERAL SPECIFICATIONS:

1. DESCRIPTION
FIVE-CONDUCTOR, ONE CONDUCTOR SHIELDED, ONE DRAIN WIRE MICROPHONE CABLE
2. OUTER JACKET
BLACK NEOPRENE
OVERALL DIAMETER (INCHES) .195 +/- .010
3. CONDUCTORS
 1. FOUR UNSHIELDED CONDUCTORS
 1. COLOR CODE
YELLOW, BLUE, RED, AND BLACK
 2. MATERIAL
STRANDED TINNED COPPER WIRE CONSISTING OF 7 STRANDS OF #34 AWG WIRE
(#26 TOTAL GAUGE)
 3. INSULATION
POLYPROPYLENE TO A DIAMETER OF .035 NOMINAL
 2. ONE SHIELDED CONDUCTOR
 1. COLOR CODE
WHITE
 2. MATERIAL
STRANDED TINNED COPPER WIRE CONSISTING OF 7 STRANDS OF #34 AWG WIRE
(#26 TOTAL GAUGE)
 3. SHIELD
#38 AWG TINNED COPPER WIRE WOUND OVER WHITE CONDUCTOR ONLY
 3. DRAIN WIRE
#22 AWG (26 STRANDS OF #36 AWG TINNED SOFT COPPER)
 4. INNER CABLE COVERING
MYLAR SPIRAL WRAP
4. CONNECTOR (MICROPHONE END)
 1. SIX-PIN MODULAR RJ-11 PLUG, WITH NEOPRENE FLEX RELIEF BOOT (Note: Data sheets for many Shure Modulink communications microphones show an 8-pin connector in the microphone, but only the middle 6 pins are used.)
 2. WIRING SCHEME
PIN 1 = RED
PIN 2 = YELLOW
PIN 3 = BLUE
PIN 4 = BLACK
PIN 5 = WHITE
PIN 6 = DRAIN

IMPORTANT!
CABLE AND CONNECTOR ASSEMBLY FOR
MODELS 550T, 590T, 885TT MICROPHONES

When using early production 885TT microphones, red jumper from D-E (W301) must be removed. In later production units, red jumper D-E (W301) is moved to location F-G (W309), per user guide instructions. (No modification required for models 550T and 590T.)

For Tait radios requiring CTCSS function, the following modification is required. Open microphone and access main PCB assembly. Remove blue wire from hangup button to PCB. Solder a 12 kilohm resistor from the hangup button to the yellow wire terminal on the PTT switch. Insulate resistor with tape to prevent shorting. This allows proper CTCSS operation when used with a grounded hangup bracket.
